Work Mode & Location:

Remote (Work From Home), Bhubaneswar (BBSR)

Shift:

Not specified

Requirements

Proficiency in programming languages such as Java, Python, or C++

Experience with software development methodologies like Agile or Scrum

Hands-on with database management systems including MySQL or MongoDB

Understanding of operating systems including Windows, Linux, or macOS

Experience with cloud platforms like AWS or Azure

Proficiency in version control systems such as Git

Hands-on with containerization using Docker

Understanding of DevOps practices and tools

Experience with issue tracking and project management tools like Jira or Asana

Proficiency in troubleshooting and debugging techniques

Understanding of software testing frameworks and methodologies

Experience with collaboration tools like Slack or Microsoft Teams

Hands-on with API design and development

Understanding of security best practices and protocols

Proficiency in writing clean, efficient, and well-documented code

Responsibility

Design and develop high-quality, scalable, and efficient software solutions to meet customer needs and business requirements.

Implement robust and reliable code, following best practices and coding standards, to ensure smooth system operations and minimal downtime.

Optimize system performance, identifying bottlenecks and areas for improvement, to enhance overall user experience and productivity.

Collaborate with cross-functional teams, including QA, DevOps, and Product Management, to ensure seamless integration and effective issue resolution.

Review and analyze system logs, error reports, and performance metrics to identify trends, issues, and areas for improvement.

Troubleshoot complex technical issues, using debugging tools and techniques, to resolve problems efficiently and effectively.

Develop and maintain technical documentation, including system architecture, design patterns, and code comments, to facilitate knowledge sharing and collaboration.

Implement automated testing and deployment scripts, using tools like Jenkins or GitLab CI/CD, to streamline the development and release process.

Collaborate with the DevOps team to design and implement scalable infrastructure, using cloud platforms like AWS or Azure, to support growing business needs.

Analyze customer feedback and system metrics to identify areas for improvement and inform product roadmap decisions.

Develop and maintain expertise in relevant programming languages, technologies, and frameworks, staying up-to-date with industry trends and best practices.
